ABOUT

I am an android developer and an enthusiastic coder living in Rajkot city.

I love to code! I think that programming different problems' solutions help me understand how many things in real life can be solved with the help of computer science. I am also a PC gamer who loves to play games on casual as well as competitive level.

I've also been studying multiple programming languages like C, C++, Java, Python, HTML/CSS, JavaScript and I've been active in online competitive coding for almost 3 and a half years now!

EDUCATION

High School

Shree P. V. Modi High School, Rajkot
(2013-2015)

Bachelor of Engineering in Computer Science

Government Engineering College, Rajkot
(2015-Pursuing)

SKILLS

C/C++	Java	Android	Competitive Coding	Algorithms & Data Structures
VCS Tools (GitHub)		Console Applications	Python	Basics of HTML/CSS, JS,
Tensorflow	Material Design			

- Able to work independently as well as with team setups
- Constantly learning new technology
- Working knowledge of VCS Tools (Version Control System) like GitHub
- Thorough understanding of Analysis of algorithms and Data structures
- Able to analyze algorithms and codes

PROJECTS

NoteUp: NoteUp is an easy way to keep track of your daily thoughts that you have to capture and keep it in your phone from where you can fetch it anytime and remind you in a simple way! It's a great assistant to write notes, memos, make your own shopping lists and to do lists. It makes to take a note easier than any other notepad and memo apps.

Competitive-Solutions (In Progress): I always wanted to help other people of the community in some way so I decided to help beginner Coders. This project includes solutions of various different programming questions and contests of online platforms like [HackerRank](#), [HackerEarth](#), [SPOJ](#), [CodeChef](#) etc. This is a small but maybe useful project to all the beginners out there trying to learn coding.
